Magnum Tarper System

The Magnum was built to be tough, reducing repairs. Our modular pivot was designed to make your job easier. Arm deflectors and a lower profile design help keep containers off the arms, avoiding damage, saving you time and money. The hydraulic hoses are routed inside the arms for added protection. The system is available in steel or aluminum and will cover loads from 10 to 50 cubic yards. The Magnum also features durable 1/4" heavy-duty arms which is a bolted two piece arm. It's operated by a single joystick with a fixed gantry.
